

**Safenode**

Safenode Product Pitch

Passkey-first security for identity, recovery, and team secrets.

Document version: 2026-07-27

Product: Safenode

Classification: Internal / customer-safe where noted

The opportunity

Passkeys improve how people prove identity. They do not, by themselves, solve recovery, device replacement, shared operational secrets, or team access governance.

Safenode is the security continuity layer after sign-in: a client-encrypted vault and control plane for people, devices, recovery, and teams.

The product

- **Identity:** phishing-resistant passkey authentication and trusted devices.
- **Vault:** personal encrypted secrets with password, recovery-kit, and passkey-PRF unlock paths.
- **Recovery:** user-held recovery kits, device re-approval, successor continuity, and migration cues.
- **Teams:** encrypted team workspaces, membership, roles, invitations, and audit history.
- **Operations:** reports, security posture, billing entitlements, and release evidence.

Why it is defensible

- The passkey is part of the cryptographic vault unlock path when WebAuthn PRF is supported, not only a UI gate.

- The backend stores encrypted payloads and wrapped ciphertext, not the master password, raw vault key, recovery kit, or PRF output.
- Fallbacks are honest: password and recovery-kit unlock remain available when a browser or authenticator lacks PRF.
- Device and team controls connect authentication to real access continuity.

Current production system

Surface	Current platform	Status
Frontend	Cloudflare Pages / safe-node.app	Live
Backend	Railway / api.safe-node.app	Live
Database	Railway Postgres via Prisma	Live
Email	Resend / mail.safe-node.app	Verified
Billing	Paddle signed checkout/webhooks	Configured
Telemetry	Sentry backend/frontend	Configured

Business model

Plan	Monthly	Annual
Free	\$0	Free
Personal	\$2.49/mo	\$24.90 billed annually
Family	\$4.16/mo	\$41.60 billed annually
Teams	\$8.32/mo	\$83.20 billed annually

Annual is the default selection in the app. Users can toggle Monthly before checkout; the selected cadence determines the Paddle price. Trial duration is configured on the corresponding Paddle price record.

Launch readiness

- CI tests and type-checks are green.
- Cloudflare Pages and Railway production paths are live.
- Passkey, vault, recovery, device, email, team, and billing smoke tests remain release gates.
- Formal penetration testing, privacy/legal review, and independent assurance are recommended before making certification claims.
